 NPTEL (<https://swayam.gov.in/explorer?ncCode=NPTEL>) » **Programming, Data Structures And Algorithms Using Python (course)**

Course outline

How does an NPTEL online course work? ()

Week 1 : Introduction ()

Week 1 Quiz ()

Week 2: Basics of Python ()

Week 2 Quiz ()

Week 2 Programming Assignment ()

Week 3: Lists, inductive

Online Test 2 Question 4

Due on 2020-12-01, 22:00 IST

Question 4

Recall that the positions in a list of length n are $0, 1, \dots, n-1$. We want to write a function `oddpозиtions(l)` that returns the elements at the odd positions in l . In other words, the function should return the list `[l[1], l[3], ...]`. For instance `oddpозиtions([]) == []`, `oddpозиtions([7]) == []`, `oddpозиtions([8, 11, 8]) == [11]` and `oddpозиtions([19, 3, 44, 44, 3, 19]) == [3, 44, 19]`. A recursive definition of `oddpозиtions` is given below. You have to fill in the missing argument for the recursive call.

```
def oddpositions(l):
    if len(l) <= 1:
        return([])
    else:
        return(...)
```

Open up the code submission box below and fill in the missing argument for the recursive call.

Sample Test Cases

	Input	Output
Test Case 1	<code>oddpозиtions([13, 42, 12, 16, 18])</code>	<code>[42, 16]</code>
Test Case 2	<code>oddpозиtions([1, 2, 3, 4, 5, 6, 7, 8, 9, 10])</code>	<code>[2, 4, 6, 8, 10]</code>
Test Case 3	<code>oddpозиtions([2, 3, 4, 5, 6, 7, 8, 9, 10, 11])</code>	<code>[3, 5, 7, 9, 11]</code>

Test Case 4

oddpositions([3,4,5,6])

[4, 6]

Test Case 5

oddpositions([8,11,8])

[11]

Test Case 6

oddpositions([19,3,44,44,3,19])

[3, 44, 19]
